ASSEMBLY DETAILS

SleepSafe® Bed
LATCH SAFETY BLOCK - ADD ON

This kit is for installing a latch safety block.
*Kit includes:* 4 latch safety blocks and 4 phillips head screws.
Tools needed: Phillips head screwdriver

This kit is designed as an add-on option for beds whose occupants can reach over the top of the safety rail and pull against the latch handle, causing it to disengage. The blocks help deter an accidental unlatching of the mechanism.

❶ REMOVE SAFETY RAIL FROM BED
Lay it down so the latch side is facing up.

❷ ATTACH BLOCK TO SAFETY RAIL
Place the latch block directly under the safety rail cap as shown and insert screw into the hole. Tighten the screw with your phillips head screwdriver until there is no play between the block and the safety rail.

❸ REPEAT ABOVE STEPS TO THE ALL SIDES OF THE SAFETY RAILS
Once completed, reinstall safety rails and confirm the latch operates properly. Block should provide difficulty in latch operation.
